

Magnacool Machine Oils

Products	Description
AW Series 32/46/68/100/150	Magnacool Premium quality antiwear hydraulic oils blended from high viscosity Index chemically stable base oils, specially selected antiwear, antirust and anti oxidation additives. These high quality products are designed for use in high pressure hydraulic systems of machine tools and power packs.
HLP Series 32/46/68/100/150	Magnacool HLP Series Hydraulic Oils are high-performance lubricants specifically formulated to provide optimal protection and efficiency in hydraulic systems. With excellent anti-wear properties, superior oxidation stability, and effective corrosion protection, these oils ensure reliable operation and extended equipment life. Designed for a wide range of industrial and mobile applications, the HLP series delivers exceptional performance under varying temperature and pressure conditions.
Slideway Lubricating Oils VG 22/32/46/68/100	Magnacool Slideway Lubricating Oils are formulated from base oils that exhibit minimal viscosity variation with temperature. These oils are specifically designed for the lubrication of machine tool guideways and slides, ensuring consistent performance and protection under varying operating conditions.
Spindle Oils Nos. 2/5/10/12	Magnacool Spindle Oils are specially formulated to meet the demands of high-speed spindles in machine tools, as well as general and anti-friction bearings. These oils provide optimal performance in applications requiring low viscosity, ensuring smooth operation and reduced wear.
